Product and set up information.

The bamboo privacy fence panel come in two components, the post and the bamboo panels, there are five wood stringers between the two layers of bamboo planks, to install the fence, please follow the following steps

- 1) You need to dig holes to set the posts into the ground where the fence would be erected. holes size should be 24cm in width with a depth of 75cm. Quick set concrete is recommended.
- 2) Then set the first post up, install the bamboo panel by inserting the stringers into the pre-drilled holes, followed by the second post. Fasten the panel with stainless steel wood screws, repeat the process panel by panel. Make sure to leave a gap minimum of 5cm between the ground and the panel.
- 3) Recommend putting a coating of pavement tar sealer over the section of post footing which will be buried into the concrete.
